Local public
administration

Status

Local community

Mission

Management of the
territory and user's
support

Objective

An open source
developing process

Country

France

OW2 Project

™ The Business Intelligence Free Platform™

Marseille Provence Chambre Commerce et Industrie chose SpagoBI to start an open source developing process, which enables the development of reliable analysis and reports concerning the local business and environmental reality.

Chambre Commerce et Industrie Marseille Provence

Founded in 1599, CCIMP is a 100% local community, committed to business activities as well as to the management and support of the 60,000 companies set on its territory. Among its IT general objectives, CCIMP has started an open source developing process, in which SpagoBI has played an important role. This project contributes to the achievement of CCIMP objectives, related to an efficient management of its territory and to the support of its users' development and innovation.

Need for an open source platform

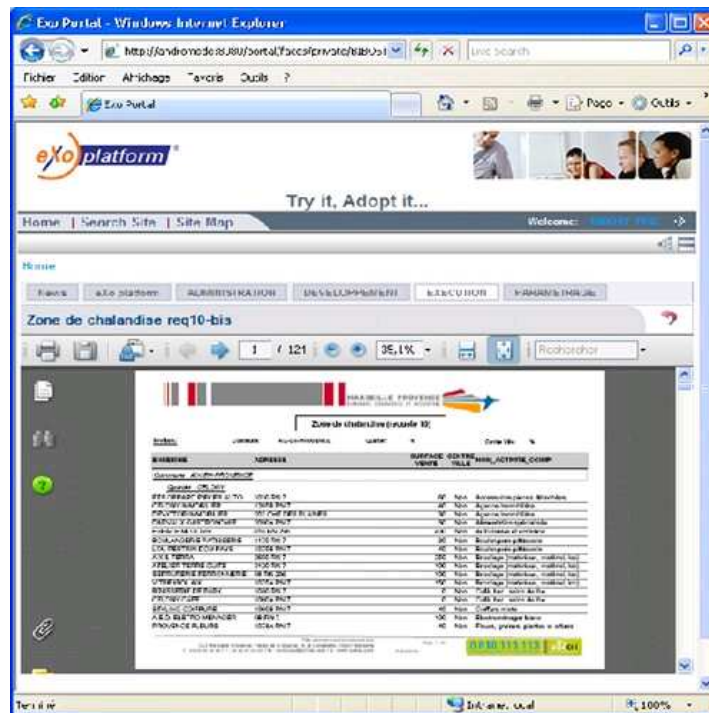

SpagoBI has been used by CCIMP within its open source developing process, which appears to be:

- progressive, aiming at continuously supporting its users;
- part of a niche market, where Open Source offering is highly efficient and reliable;
- pragmatic and rational, through a deep analysis of users' needs and through a mixed open source and commercial offering, sometimes supplied through business software packages.

How to satisfy CCIMP requirements

Within CCIMP open source development process, some projects concern reports development, based on data coming from the commercial establishments located on its territory as well as on the results of an inquiry dealing with the sustainable environmental development. In both use cases, the reporting is related to parameterized default relations (regarding 40 environs).

SpagoBI platform, integrated with eXo and JasperReports solutions, has met the community's expectations. Moreover, the development time, usually accepted for this type of solutions, has been totally respected. In this open source developing process with open source solutions, CCIMP has been supported by Micropole Unvers, SpagoBI integrator partner.

Key Benefits

- Analyzing local data in order to gather useful information for a continuous development of the territory;
- Ensuring that technical targets are matched and that technical quality meets CCIMP requirements.

Professional Support

- SpagoBI is the unified Free Platform for the development of BI solutions at enterprise level;
- SpagoBI is supported by Engineering Group (www.eng.it), an IT global player and Italy's largest operator in the IT services market.

About OW2

Founded in January 2007 as a result of the merger of ObjectWeb and OrientWare communities, OW2 is an independent industry consortium dedicated to developing open source code middleware and to fostering a vibrant community and business ecosystem. Building on the legacy of ObjectWeb and OrientWare, OW2 federates more than one hundred organizations and 6000 developers in Europe, Asia and the Americas. OW2 hosts over one hundred technology Projects, including Lomboz, Sync4j, eXo Platform, XWiki, SpagoBI and JOnAS. Several of the OW2 projects are combined into market-driven Initiatives, such as the ESB/SOA Initiative and the Business Intelligence Initiative, which facilitate their implementation by systems integrators, OEMs and end-users. A typical global open-source organization, OW2 aims to bring together grassroots communities across all continents through Local Chapters. [More information about OW2 is available at http://www.ow2.org](http://www.ow2.org)
